BRIDGE

RETROFIT VALVE INSTALLATION

The BRIDGE is compatible with all weather balloon inflators that use a standard 3/4 inch hose assembly by attaching the included Retrofit Valve. Almost all commercially available inflators are compatible.

Tools Required: Flathead Screwdriver
Time: 2 Minutes

1. **Remove the existing nozzle from your weather balloon inflator by unscrewing the metal hose clamp and pulling off the nozzle. Nozzles are typically barbed and this will require some force.**
2. **Reuse the existing clamp or replace it with the included hose clamp. Leave the clamp on the hose while replacing the valve.**
3. **Insert the Retrofit Valve until flush with the end of the hose, and hand tighten the hose clamp.**
4. **You are now a stratospheric aircraft systems engineer.**
